/202 cont./

372 They make fire by the rotation method, and the sticks which they use in this process are carried with them tied to the quiver (cf. Barker, 1953, p. 462, Fig. 6). If the camp is situated at a relatively short distance, the women carry a piece of lighted firewood upon which they blow on the way so that it will not go out. Fire is a source of light and heat in the rancherias, and they keep it burning all night long to protect themselves from the cold, from evil spirits, and from dangerous animals.

283 The Sanemá women spin cotton by means of a spindle which they roll on the thigh. The cord is twisted with three threads.

286 301 294 352 They do not weave and use the thread only to make ornaments, guayucos /loincloths/, and sometimes hammocks /hamacas/ and güenepes. The baskets that they manufacture are well made and are very useful for carrying the products of the conuco, firewood, and sometimes large pots made of baked clay; the method that they employ to make baskets (twining) is primitive, common to the marginal peoples of South America. The Sanemá make pottery vessels, conical in shape, but their method is very primitive. The most common container is the gourd.

285 [323] 323 415

412 [237] A cutting implement (gouging tool) which is widely used is the knife made with agouti teeth. It is used exclusively by the men and is made by attaching an incisor of the rodent to a small stick 10 centimeters long by means of gum and a fine plant-fiber. The men carry it in the quiver, under their arm ornament, or, as we saw on the upper Ventuari, in the opening of the ear lobe. With this instrument they make arrows; it is used to mount the point or to open the lower end of the shaft where the peg, provided with a groove for the bowstring, is inserted. The groove is also made with the tooth knife. Becher (1960, p. 54) reports [593] that jealous Surará and Pakidai men sometimes use it to wound [727] their wives, and an informant from the Erebato told us that they also used it to gouge out the eyes of enemy men who had been captured and identified as murderers of a member of the group. The Indian said that once they have gouged out the eyes they free their victims, who die a few days later in the forest. The knife is sharpened with a stone. This type of primitive knife [184] has been found in most of the Yanoama subtribes: Waika
